| EMBARGOE | D UNTIL RELEASE AT 8:30 A.M. EDT, TH | URSDAY, APRIL 30, 2020 | BEA 20-20 |

Personal Income and Outlays: March 2020

Personal income decreased \$382.1 billion (2.0 percent) in March according to estimates released today by the Bureau of Economic Analysis (tables 3 and 5). **Disposable personal income** (DPI) decreased \$334.6 billion (2.0 percent) and **personal consumption expenditures** (PCE) decreased \$1,127.3 billion (7.5 percent).

Real DPI decreased 1.7 percent in March and **Real PCE** decreased 7.3 percent (tables 5 and 7). The **PCE price index** decreased 0.3 percent. Excluding food and energy, the PCE price index decreased 0.1 percent (table 9).

Coronavirus (COVID-19) Impact on March 2020 Personal Income and Outlays

The decline in March personal income and outlays was, in part, due to the response to the spread of COVID-19, as governments issued "stay-at-home" orders. This led to rapid changes in demand, as businesses and schools switched to remote work or canceled operations, and consumers canceled, restricted, or redirected their spending. The full economic effects of the COVID-19 pandemic cannot be quantified in the Personal Income and Outlays estimate for March 2020 because the impacts are generally embedded in source data and cannot be separately identified. For more information, see the Advance first-quarter 2020 GDP <u>Technical Note</u>. For additional information on the monthly assumptions for personal consumption expenditures, see the <u>Key Source Data Table</u>.

| Current dollars | 0.4 | 0.2 | 0.5 | 0.5 | -2.0 | | | |
| Chained (2012) dollars | 0.4 | -0.1 | 0.4 | 0.4 | -1.7 | | | |
| Personal consumption expenditures (PCE): | | | | | | | | |
| Current dollars | 0.3 | 0.4 | 0.4 | 0.2 | -7.5 | | | |
| Chained (2012) dollars | 0.2 | 0.1 | 0.3 | 0.1 | -7.3 | | | |
| Price indexes: | | | | | | | | |
| PCE | 0.1 | 0.3 | 0.2 | 0.1 | -0.3 | | | |
| PCE, excluding food and energy | 0.1 | 0.2 | 0.2 | 0.2 | -0.1 | | | |
| Price indexes: | Percent change from month one year ago | | | | | | | |
| PCE | 1.3 | 1.6 | 1.8 | 1.8 | 1.3 | | | |
| PCE, excluding food and energy | 1.5 | 1.6 | 1.7 | 1.8 | 1.7 | | | |

The decrease in personal income in March primarily reflected a decrease in compensation (table 3). The estimate of private wages and salaries was primarily based on data from the Bureau of Labor Statistics monthly Current Employment Statistics report as well as unemployment insurance claims data from the Department of Labor's Employment and Training Administration. For more information, see "How did BEA adjust March 2020 wages and salaries to account for the effects of COVID-19?".

The decrease in real PCE in March reflected a decrease of \$829.9 billion in spending for services and a \$104.9 billion in spending for goods (table 7). Within services, the leading contributor to the decrease was spending on health care, including physician, dental, and paramedical services. Other contributors to the decrease in services were spending on food services and accommodations as well as recreation services. Within goods, the leading contributor to the decrease was spending on motor vehicles and parts. Partially offsetting the decreases in many categories of spending on goods was an increase in spending for food and beverages purchased for off-premises consumption. Detailed information on monthly real PCE spending can be found on Table 2.3.6U.

Personal outlays decreased \$1.16 trillion in March (table 3). **Personal saving** was \$2.17 trillion in March and the **personal saving rate**, personal saving as a percentage of disposable personal income, was 13.1 percent (table 1).

Upcoming Annual Update of the National Income and Product Accounts

BEA will release results from the 2020 annual update of the National Income and Product Accounts on July 30, 2020, in conjunction with the advance estimate of GDP for the second quarter of 2020. For more information, see the GDP <u>Technical Note</u>.

Updates to Personal Income and Outlays

Estimates have been updated for January and February. Revised and previously published changes from the preceding month for current-dollar personal income, and for current-dollar and chained (2012) dollar DPI and PCE, are shown below.

Definitions

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Disposable personal income is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

Personal consumption expenditures (PCE) is the value of the goods and services purchased by, or on the behalf of, "persons" who reside in the United States.

Personal outlays is the sum of PCE, personal interest payments, and personal current transfer payments.

Personal saving is personal income less personal outlays and personal current taxes.

The *personal saving rate* is personal saving as a percentage of disposable personal income.

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

For more definitions, see the <u>Glossary: National Income and</u> <u>Product Accounts</u>.

Statistical conventions

Annual rates. Monthly and quarterly values are expressed at seasonally-adjusted annual rates (SAAR). Dollar changes are calculated as the difference between these SAAR values. For detail, see the FAQ "<u>Why does BEA publish estimates at annual rates?</u>"

Month-to-month percent changes are calculated from unrounded data and are not annualized.

Quarter-to-quarter percent changes are calculated from unrounded data and are displayed at annual rates. For detail, see the FAQ "<u>How is average annual growth</u> <u>calculated</u>?"

Quantities and prices. Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (months for monthly data, quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, see Chapter 4: Estimating Methods in the <u>NIPA Handbook</u>.

Chained-dollar values are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

[.] r Revised

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

6. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual and quarterly estimates are averages of the monthly estimates.

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

6. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual and quarterly estimates are averages of the monthly estimates.

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period. 2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

r Revised

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

2. Consists of gasoline and other energy goods and of electricity and gas services.

3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.
