GUAM GDP DECREASES 0.3 PERCENT IN 2018

Growth in tourism offset by decreases in local government and business investment

HAGÁTÑA, GUAM (October 9, 2019) -- Today, the Bureau of Economic Analysis (BEA) is releasing estimates of gross domestic product (GDP) for Guam for 2018, in addition to estimates of GDP by industry and compensation by industry for 2017.¹ These estimates were developed under the Statistical Improvement Program funded by the Office of Insular Affairs (OIA) of the U.S. Department of the Interior.

Revised estimates of GDP for 2015 to 2017, as well as revised estimates of GDP by industry and compensation by industry for 2015 and 2016, are also presented in this release.

Gross Domestic Product for 2018

The estimates of GDP for Guam show that real GDP—GDP adjusted to remove price changes—decreased 0.3 percent in 2018 after increasing 0.2 percent in 2017 (see Table 1.3). For comparison, real GDP for the United States (excluding the territories) increased 2.9 percent in 2018 after increasing 2.4 percent in 2017.

¹ These estimates are based on limited source data and are subject to revision.

The decline in the Guam economy in 2018 reflected decreases in territorial government spending and private fixed investment that were partly offset by growth in exports of services (see Table 1.4).

Territorial government spending decreased 1.3 percent. Guam government spending on construction and equipment decreased despite progress on major infrastructure projects, including an improved wastewater treatment plant.

Private fixed investment decreased 0.9 percent, reflecting a continued decline in business spending on construction. Although overall construction employment grew in 2018, much of this employment was related to Defense construction; in the private sector, a number of major projects were delayed.

Exports of services, which consists primarily of spending by tourists, grew 2.2 percent. This reflected increases in total visitor arrivals and average spending by Korean and Japanese tourists, who make up much of Guam's tourist market.

Gross Domestic Product by Industry and Compensation by Industry for 2017

The estimates of GDP by industry for Guam show that the private sector was the source of the growth in real GDP in 2017 (see Table 2.5). The largest contributor to growth was distributive services, reflecting increased activity of the retail sector.

The compensation by industry estimates, which are measured in current dollars, show trends in compensation for major industries (see Table 2.6). Total compensation increased in 2017, primarily reflecting growth in distributive services and in "other" private industries.

The accompanying tables present estimates for GDP and its major components, GDP by industry, and compensation by industry. Also included in this release are estimates for the major components of gross domestic income.

Revisions to GDP

Estimates for 2015 to 2017 that were released on November 14, 2018 have been revised in order to incorporate improvements to source data, including newly available data for territorial government spending and revenues from government financial statements and reports. The revised estimates show a similar pattern of inflation-adjusted growth as the previously published estimates (see Table 1.7).

Future Directions

Moving forward, an agreement between OIA and BEA will extend and improve the estimates of GDP for Guam. The information provided by the Guam government will continue to be critical to the successful production of these estimates.

BEA will conduct a comprehensive update of GDP for Guam next year. Estimates of GDP will be revised to reflect methodological improvements and the availability of more complete data over time, in some cases back to 2002. Information from the Census Bureau's 2017 Economic Census of Island Areas, the most comprehensive industry data available for Guam and the other island areas, will be incorporated at this time. BEA currently plans to release these estimates, in addition to new GDP estimates for 2019, in the fall of 2020. GDP by industry and compensation by industry estimates for 2018 will also be released.

Definitions

Gross domestic product (GDP) is the value of the goods and services produced by the Guam economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, private fixed investment, net exports of goods and services, and government consumption expenditures and gross investment.

Personal consumption expenditures (PCE), also referred to as “consumer spending,” measures the goods and services purchased by “persons”—that is, by households and by nonprofit institutions serving households (NPISHs)—who are resident in Guam.

Private fixed investment (PFI) measures spending by private businesses, nonprofit institutions, and households on fixed assets in the Guam economy. Fixed assets consist of structures, equipment, and software that are used in the production of goods and services.

Net exports of goods and services is the difference between exports of goods and services and imports of goods and services. Exports measures the portion of total Guam production of goods and services that is provided to the rest of the world. Imports measures the portion of total

Guam expenditures that is accounted for by goods and services provided by the rest of the world.

Government consumption expenditures and gross investment, or “government spending,” measures the portion of GDP that is accounted for by the government sector. Government consumption expenditures consists of spending by government to produce and provide services to the public. Gross investment consists of spending by government for fixed assets that directly benefit the public or that assist government agencies in their production activities.

Gross domestic income (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal.

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at “market value.” Also referred to as “nominal estimates” or as “current-price estimates.”

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

Statistical Conventions

Quantities and prices. Quantities, or “real” volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2009). Quantity and price indexes are calculated using a Fisher chain-weighted formula that incorporates weights from two adjacent years. “Real” dollar series are calculated by multiplying the quantity index by the current-dollar value in the reference year (2009) and then dividing by 100.

Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year.

Table 2.5. Contributions to Percent Change in Real Gross Domestic Product by Industry

	Line											
		2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	
Percent change:												
Gross domestic product	1	1.7	0.3	2.1	0.1	2.0	1.8	1.7	0.5	0.3	0.2	
Percentage points:												
Private industries	2	1.11	-1.19	0.72	-0.54	2.39	1.47	1.34	0.05	1.08	0.45	
Construction	3	1.20	0.00	0.86	-0.65	0.44	0.78	0.19	-0.51	-0.63	-0.24	
Distributive Services	4	0.69	-0.80	0.52	0.15	0.49	-0.27	0.39	0.16	1.03	0.35	
Accommodations and Amusement	5	0.17	-0.34	0.63	0.37	0.27	0.80	0.93	0.35	0.63	0.18	
Other Private	6	-0.94	-0.06	-1.29	-0.41	1.19	0.15	-0.16	0.04	0.05	0.16	
Government	7	0.60	1.53	1.37	0.67	-0.37	0.36	0.38	0.43	-0.79	-0.20	
Federal	8	0.83	1.86	0.58	0.30	-0.38	-0.03	0.10	0.25	-0.82	-0.40	
Territorial	9	-0.22	-0.34	0.79	0.36	0.01	0.39	0.28	0.18	0.03	0.20	

NOTE. Percentage-point contributions do not sum to the percent change in real gross domestic product because of rounding and differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

Table 2.6. Compensation of Employees by Industry

	Line	[Millions of dollars]
