

# **News Release**

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EDT, THURSDAY, MARCH 25, 2021

BEA 21-11

Technical: Lisa Mataloni (GDP) (301) 278-9083 <u>gdpniwd@bea.gov</u>

Kate Pinard (Corporate Profits) (301) 278-9417 <u>cpniwd@bea.gov</u>

Media: Jeannine Aversa (301) 278-9003 Jeannine.Aversa@bea.gov

# Gross Domestic Product (Third Estimate), Corporate Profits, and GDP by Industry, Fourth Quarter and Year 2020

**Real gross domestic product** (GDP) increased at an annual rate of 4.3 percent in the fourth quarter of 2020 (table 1), according to the "third" estimate released by the Bureau of Economic Analysis. In the third quarter, real GDP increased 33.4 percent.

The "third" estimate of GDP released today is based on more complete source data than were available for the "second" estimate issued last month. In the second estimate, the increase in real GDP was 4.1 percent. The upward revision primarily reflected an upward revision to private inventory investment that was partly offset by a downward revision to nonresidential fixed investment (see "Updates to GDP").

The increase in **real GDP** reflected increases in exports, nonresidential fixed investment, personal consumption expenditures (PCE), residential fixed investment, and private inventory investment, that were partly offset by decreases in state and local government spending as well as federal government spending (reflecting fewer fees paid to administer the Paycheck Protection Program loans). Imports, which are a subtraction in the calculation of GDP, increased (table 2).

# COVID-19 Impact on the Fourth-Quarter 2020 GDP Estimate

The increase in fourth-quarter GDP reflected both the continued economic recovery from the sharp declines earlier in the year and the ongoing impact of the COVID-19 pandemic, including new restrictions and closures that took effect in some areas of the United States. The full economic effects of the COVID-19 pandemic cannot be quantified in the GDP estimate for the fourth quarter of 2020 because the impacts are generally embedded in source data and cannot be separately identified. For more information, see the <a href="Technical">Technical</a> Note and Federal Recovery Programs and BEA Statistics.

The increase in exports primarily reflected an increase in goods (led by industrial supplies and materials). The increase in nonresidential fixed investment primarily reflected an increase in equipment (led by transportation equipment). The increase in PCE reflected an increase in services (led by health care). The increase in residential fixed investment primarily reflected an increase in single family units. The increase in private inventory investment primarily reflected an increase in manufacturing, including both durable and nondurable goods industries.

**Current-dollar GDP** increased 6.3 percent at an annual rate, or \$324.4 billion, in the fourth quarter to a level of \$21.49 trillion. In the third quarter, GDP increased 38.3 percent, or \$1.65 trillion (tables 1 and 3). More information on the source data that underlie the estimates is available in the "Key Source Data and Assumptions" file on BEA's website.

The **price index for gross domestic purchases** increased 1.7 percent in the fourth quarter, compared with an increase of 3.3 percent in the third quarter (table 4). **The PCE price index** increased 1.5 percent, compared with an increase of 3.7 percent. Excluding food and energy prices, the PCE price index increased 1.3 percent, compared with an increase of 3.4 percent.

## **Gross Domestic Income and Corporate Profits**

**Real gross domestic income** (GDI) increased 15.7 percent in the fourth quarter, compared with an increase of 24.1 percent in the third quarter. The **average of real GDP and real GDI**, a supplemental measure of U.S. economic activity that equally weights GDP and GDI, increased 9.9 percent in the fourth quarter, compared with an increase of 28.7 percent in the third quarter (table 1).

**Profits from current production** (corporate profits with inventory valuation and capital consumption adjustments) decreased \$31.4 billion in the fourth quarter, in contrast to an increase of \$499.6 billion in the third quarter (table 10).

**Profits of domestic financial corporations** increased \$17.5 billion in the fourth quarter, compared with an increase of \$12.1 billion in the third quarter. **Profits of domestic nonfinancial corporations** decreased \$48.2 billion, in contrast to an increase of \$436.2 billion. **Rest-of-the-world profits** decreased \$0.7 billion, in contrast to an increase of \$51.3 billion. In the fourth quarter, receipts increased \$29.0 billion, and payments increased \$29.7 billion.

# **Updates to GDP**

In the third estimate, the change in fourth-quarter real GDP was revised up 0.2 percentage point from the second estimate. The updated estimates primarily reflected upward revisions to private inventory investment and state and local government spending that were partly offset by downward revisions to nonresidential fixed investment and consumer spending. For more information on the updates, see the <a href="Technical Note">Technical Note</a>. For information on the GDP update schedule, see the "Additional Information" section that follows.

	Advance Estimate	Second Estimate	Third Estimate
	(Percent cl	nange from precedin	g quarter)
Real GDP	4.0	4.1	4.3
Current-dollar GDP	6.0	6.1	6.3
Real GDI	•••		15.7
Average of Real GDP and Real GDI	•••		9.9
Gross domestic purchases price index	1.7	1.8	1.7
PCE price index	1.5	1.6	1.5
PCE price index excluding food and energy	1.4	1.4	1.3

#### **Real GDP by Industry**

Today's release includes estimates of **GDP by industry**, or value added—a measure of an industry's contribution to GDP. In the fourth quarter, private goods-producing industries increased 6.1 percent, private services-producing industries increased 4.9 percent, and government decreased 1.1 percent (table 12). Overall, 17 of 22 industry groups contributed to the fourth-quarter increase in real GDP.

The increase in private goods-producing industries reflected increases in construction and in durable goods manufacturing (led by computer and electronic products as well as fabricated metal products).

The increase in private services-producing industries reflected increases in finance and insurance (led by Federal Reserve banks, credit intermediation, and related activities); health care and social assistance (led by ambulatory health care services); administrative and waste management services (led by administrative and support services); and professional, scientific and technical services. These increases were partly offset by decreases in accommodation and food services (led by food services and drinking places); utilities; and educational services.

The decrease in the government sector reflected decreases in state and local government as well as federal government.

# **Gross Output by Industry**

Real gross output—principally a measure of an industry's sales or receipts, which includes sales to final users in the economy (GDP) and sales to other industries (intermediate inputs)—increased 6.7 percent in the fourth quarter. Private goods-producing industries increased 7.2 percent, private services-producing industries increased 7.8 percent, and government was unchanged (table 16). Overall, 17 of 22 industry groups contributed to the increase in real gross output, led by durable goods manufacturing; professional, scientific, and technical services; and health care and social assistance. Industries with notable decreases in gross output included educational services, utilities, and accommodation and food services.

#### **GDP for 2020**

**Real GDP** decreased 3.5 percent in 2020 (from the 2019 annual level to the 2020 annual level), compared with an increase of 2.2 percent in 2019 (table 1).

The decrease in real GDP in 2020 reflected decreases in PCE, exports, private inventory investment, nonresidential fixed investment, and state and local government that were partly offset by increases in federal government spending and residential fixed investment. Imports decreased (table 2).

The decrease in PCE in 2020 was more than accounted for by a decrease in services (led by food services and accommodations, health care, and recreation services). The decrease in exports reflected decreases in both services (led by travel) and goods (mainly non-automotive capital goods). The decrease in private inventory investment reflected widespread decreases led by retail trade (mainly motor vehicle dealers) and wholesale trade (mainly durable goods industries). The decrease in nonresidential fixed investment reflected decreases in structures (led by mining exploration, shafts, and wells) and equipment (led by transportation equipment) that were partly offset by an increase in intellectual property products (more than accounted for by software). The decrease in state and local government spending reflected a decrease in consumption expenditures (led by compensation).

The increase in federal government spending in 2020 reflected an increase in nondefense consumption expenditures (led by an increase in purchases of intermediate services that supported the processing and administration of Paycheck Protection Program loan applications by banks on behalf of the federal government). The increase in residential fixed investment primarily reflected increases in improvements as well as brokers' commissions and other ownership transfer costs.

**Current-dollar GDP** decreased 2.3 percent, or \$496.6 billion, in 2020 to a level of \$20.94 trillion, compared with an increase of 4.0 percent, or \$821.3 billion, in 2019 (tables 1 and 3).

The **price index for gross domestic purchases** increased 1.2 percent in 2020, compared with an increase of 1.6 percent in 2019 (table 4). The **PCE price index** also increased 1.2 percent in 2020, compared with an increase of 1.5 percent. Excluding food and energy prices, the PCE price index increased 1.4 percent, compared with an increase of 1.7 percent.

Measured from the fourth quarter of 2019 to the fourth quarter of 2020, real GDP decreased 2.4 percent during 2020 (table 6). That compared with an increase of 2.3 percent during 2019.

The **price index for gross domestic purchases**, as measured from the fourth quarter of 2019 to the fourth quarter of 2020, increased 1.2 percent during 2020. That compared with an increase of 1.4 percent during 2019. The PCE price index increased 1.2 percent, compared with an increase of 1.5 percent. Excluding food and energy, the PCE price index increased 1.4 percent, compared with an increase of 1.6 percent.

#### **Gross Domestic Income and Corporate Profits for 2020**

**Real GDI** decreased 3.5 percent in 2020, compared with an increase of 1.8 percent in 2019 (table 1). **The average of real GDP and real GDI** decreased 3.5 percent in 2020, compared with an increase of 2.0 percent in 2019.

In 2020, **profits from current production** decreased \$130.2 billion, in contrast to an increase of \$7.6 billion in 2019 (table 10). Profits of domestic financial corporations decreased \$0.5 billion, in contrast to an increase of \$38.0 billion. Profits of domestic nonfinancial corporations decreased \$55.7 billion, compared with a decrease of \$23.3 billion. Rest-of-the-world profits decreased \$74.0 billion, compared with a decrease of \$7.1 billion. In 2020, receipts decreased \$117.8 billion, and payments decreased \$43.8 billion.

## Real GDP by Industry for 2020

In 2020, private goods-producing industries decreased 2.7 percent, private services-producing industries decreased 3.9 percent, and government decreased 2.1 percent (table 12). Overall, 16 of 22 industry groups contributed to the decrease in real GDP in 2020 (table 13).

Within private goods-producing industries, the leading contributors to the decrease were durable goods manufacturing (led by other transportation equipment) and mining.

Decreases within the private services-producing industries were widespread; the leading contributors to the decrease were accommodation and food services (led by food services and drinking places); arts, entertainment, and recreation; health care and social assistance (led by ambulatory health care services); and transportation and warehousing. Partly offsetting these decreases were increases in information (mainly data processing, internet publishing, and other information services) and in finance and insurance (mainly Federal Reserve banks, credit intermediation, and related activities).

The decrease in government reflected a decrease in state and local government that was partly offset by an increase in federal government.

**Real gross output** in 2020 decreased 3.3 percent. Private goods-producing industries decreased 2.7 percent, private services-producing industries decreased 3.9 percent, and government decreased 0.7 percent (table 16). Overall, 16 of 22 industry groups contributed to the decrease in real gross output.

#### **Definitions**

Gross domestic product (GDP), or value added, is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

**Gross domestic income** (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal. In practice, GDP and GDI differ because they are constructed using largely independent source data.

**Gross output** is the value of the goods and services produced by the nation's economy. It is principally measured using industry sales or receipts, including sales to final users (GDP) and sales to other industries (intermediate inputs).

**Current-dollar estimates** are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

**Real values** are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

The *gross domestic purchases price index* measures the prices of final goods and services purchased by U.S. residents.

The *personal consumption expenditure price index* measures the prices paid for the goods and services purchased by, or on the behalf of, "persons."

**Personal income** is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

**Disposable personal income** is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

**Personal outlays** is the sum of personal consumption expenditures, personal interest payments, and personal current transfer payments.

**Personal saving** is personal income less personal outlays and personal current taxes.

The *personal saving rate* is personal saving as a percentage of disposable personal income.

**Profits from current production**, referred to as corporate profits with inventory valuation adjustment (IVA) and capital consumption (CCAdj) adjustment in the National Income and Product Accounts (NIPAs), is a measure of the net income of corporations before deducting income taxes that is consistent with the value of goods and services measured in GDP. The IVA and CCAdj are adjustments that convert inventory withdrawals and depreciation of fixed assets reported on a tax-return, historical-cost basis to the current-cost economic measures used in the national income and product accounts. Profits for domestic industries reflect profits for all corporations located within the geographic borders of the United States. The rest-ofthe-world (ROW) component of profits is measured as the difference between profits received from ROW and profits paid to ROW.

For more definitions, see the <u>Glossary: National Income and Product Accounts</u>.

#### Statistical conventions

**Annual-vs-quarterly rates.** Quarterly seasonally adjusted values are expressed at annual rates, unless otherwise specified. This convention is used for BEA's featured, seasonally adjusted measures to facilitate comparisons with related and historical data. For details, see the FAQ "Why does BEA publish estimates at annual rates?"

Quarterly not seasonally adjusted values are expressed only at quarterly rates.

**Percent changes.** Percent changes in quarterly seasonally adjusted series are displayed at annual rates, unless otherwise specified. For details, see the FAQ "How is average annual growth calculated?" and "Why does BEA publish percent changes in quarterly series at annual rates?" Percent changes in quarterly not seasonally adjusted values are calculated from the same quarter one year ago. All published percent changes are calculated from unrounded data.

**Calendar years and quarters**. Unless noted otherwise, annual and quarterly data are presented on a calendar basis.

**Quantities and prices.** Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisherchained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, see Chapter 4: Estimating Methods in the NIPA Handbook.

Chained-dollar values are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

#### **Updates to GDP**

BEA releases three vintages of the current quarterly estimate for GDP. "Advance" estimates are released near the end of the first month following the end of the quarter and are based on source data that are incomplete or subject to further revision by the source agency. "Second" and "third" estimates are released near the end of the second and third months, respectively, and are based on more detailed and more comprehensive data as they become available.

The table below shows the average revisions to the quarterly percent changes in real GDP between different estimate vintages, without regard to sign.

	Average Revision
	Without Regard to Sign
Vintage	(percentage points, annual rates)
Advance to second	0.5
Advance to third	0.6
Second to third	0.3

Note - Based on estimates from 1993 through 2019. For more information on GDP updates, see Revision Information on the BEA Web site.

Annual and comprehensive updates are typically released in late July. Annual updates generally cover at least the 5 most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts. Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.

Unlike GDP, advance current quarterly estimates of GDI and corporate profits are not released because data on domestic profits and on net interest of domestic industries are not available. For fourth quarter estimates, these data are not available until the third estimate.

GDP by industry and gross output estimates are released with the third estimate of GDP.

r Revised

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

<sup>1.</sup> Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Table 3. Gross Domestic Product: Level and Change from Preceding Period--Table Ends

Revised

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

<sup>1.</sup> Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Table 4. Price Indexes for Gross Domestic Product and Related Measures: Percent Change from Preceding Period

r Revised

<sup>1.</sup> Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

<sup>2.</sup> This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

r Revised

<sup>1.</sup> Gross domestic income deflated by the implicit price deflator for gross domestic product.

<sup>2.</sup> Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

<sup>3.</sup> This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without

payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Estimates under the Percent change from the preceding year columns are calculated from annual data. Estimates under the Percent change from fourth quarter to fourth quarter columns are calculated from fourth quarter values relative to the same quarter one year prior.

#### r Revised

<sup>1.</sup> Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments (net), and current surplus of government enterprises, plus personal income receipts on assets, and personal current transfer receipts.

<sup>2.</sup> The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the third quarter of 2020.

<sup>1.</sup> The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

<sup>2.</sup> Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2012 current-dollar value of the corresponding series, divided by 100.

<sup>3.</sup> Chained-dollar net value added of nonfinancial corporate business is the difference between the gross value added and the consumption of fixed capital.

<sup>4.</sup> The deflator for gross value added of nonfinancial corporate business divided by 100.

Note. Estimates in this table are based on the 2012 North American Industry Classification System (NAICS).

<sup>1.</sup> Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts,

entertainment, recreation, accommodation, and food services; and other services, except government.

Note. Percentage-point contributions do not sum to the percent change in real gross domestic product because the industry details are calculated using source data and methodologies that differ from those used to calculate growth in the top-line, expenditure-based measure of real GDP.
