

News Release

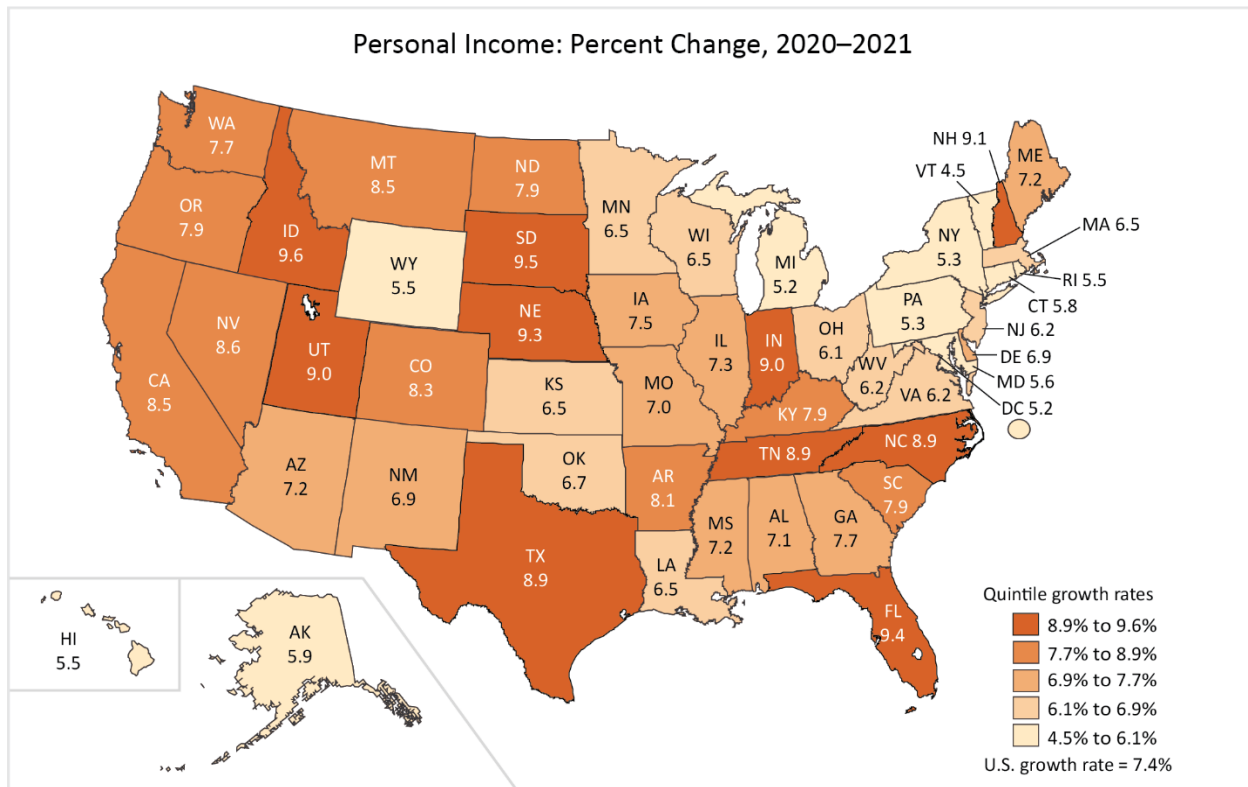

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EDT, Wednesday, March 23, 2022

BEA 22-10

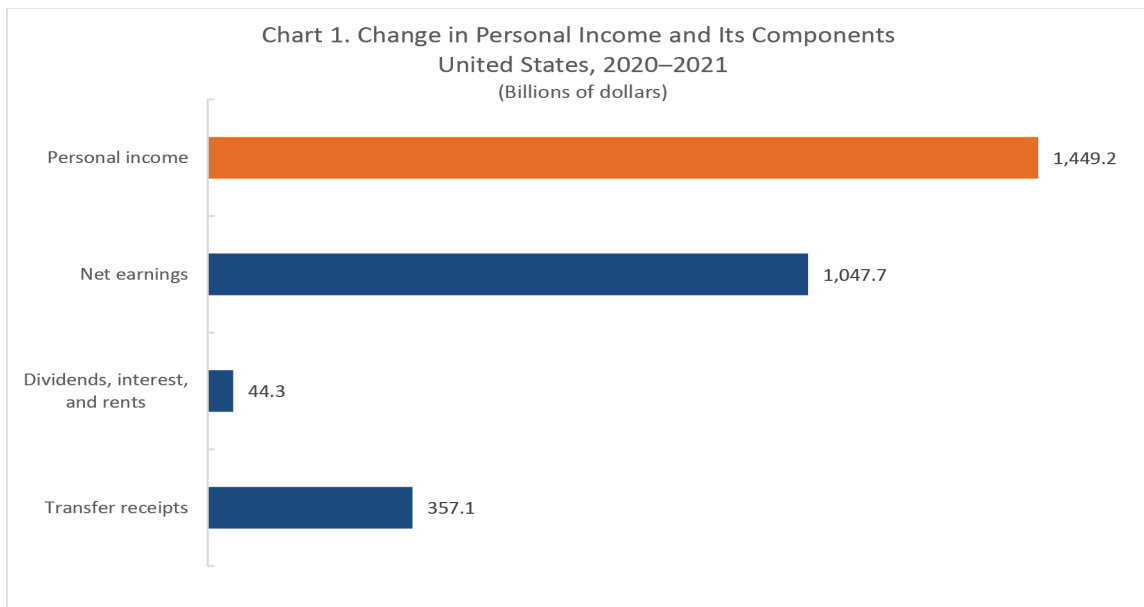

Technical: Matthew von Kerczek (301) 278-9250 REIS@bea.gov
 Mauricio Ortiz (301) 278-9269
 Media: Jeannine Aversa (301) 278-9003 Jeannine.Aversa@bea.gov

Personal Income by State, 2021 (Preliminary) and 4th Quarter 2021

State personal income increased 7.4 percent in 2021 after increasing 6.6 percent in 2020, according to estimates released today by the Bureau of Economic Analysis (BEA) (table 1). In 2021, increases in earnings, transfer receipts, and property income (dividends, interest, and rent) contributed to personal income growth in all states and the District of Columbia (table 2). The percent change in personal income across all states ranged from 9.6 percent in Idaho to 4.5 percent in Vermont.

Earnings. Earnings increased 8.9 percent, accounting for most of the \$1.4 trillion dollar increase in personal income for the nation in 2021 (chart 1). The increase in earnings reflected the continuing reopening of the economy following the onset of the COVID-19 pandemic in the first quarter of 2020.

U.S. Bureau of Economic Analysis

Earnings increased in all 24 industries for which BEA prepares estimates (table 4). The largest increases were in professional, scientific, and technical services; health care and social assistance; and retail trade. The percent change in earnings across all states ranged from 12.2 percent in New Hampshire to 3.5 percent in Alaska (table 2).

- In Idaho, the state with the largest increase in personal income, increases in earnings in construction and retail trade were the largest contributors to growth in personal income.
- In South Dakota, the state with second largest increase in personal income, an increase in farm earnings was the largest contributor to growth in personal income.

Transfer receipts. Transfer receipts increased 8.4 percent for the nation in 2021 after increasing 35.1 percent in 2020. Transfer receipts increased in all states and the District of Columbia, ranging from 18.1 percent in Alaska to 1.2 percent in Vermont (table 2). The increases in transfer receipts reflected continued payments from pandemic response legislation including the Coronavirus Response and Relief Supplemental Appropriations Act and the American Rescue Plan Act.

Property income. Property income increased 1.2 percent for the nation in 2021 after decreasing 1.0 percent in 2020. Property income increased in all states and the District of Columbia, ranging from 2.6 percent in Utah to 0.3 percent in Louisiana.

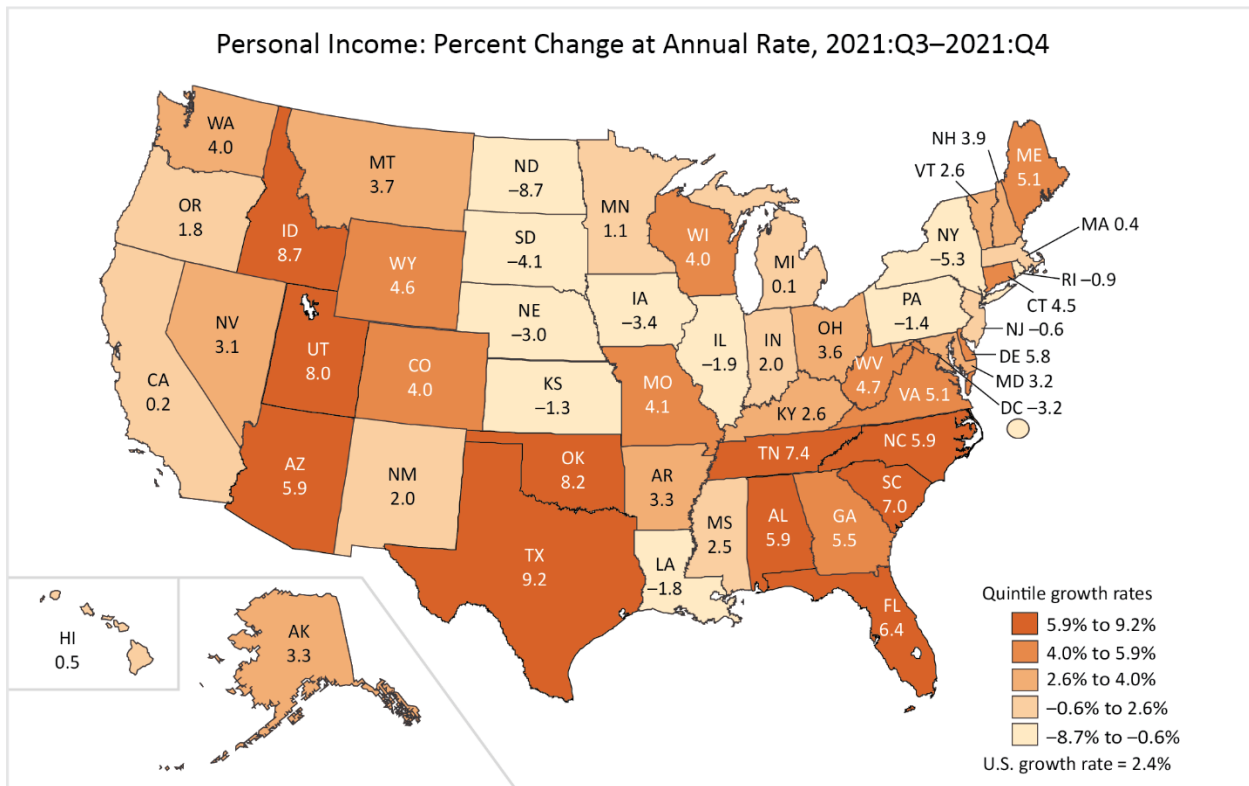

Coronavirus (COVID-19) Impact on 2021 and Fourth-Quarter 2021 State Personal Income Estimates

The 2021 annual and 2021 fourth-quarter estimates of state personal income reflect the continued economic impacts related to the COVID-19 pandemic. The 2021 annual estimates reflect the continued economic recovery, reopening of establishments, and continued government response related to the COVID-19 pandemic.

The fourth quarter estimates reflect an increase in COVID-19 cases resulting in continued restrictions and disruptions in the operations of establishments in some parts of the country. Government assistance payments in the form of forgivable loans to businesses and social benefits to households all decreased as provisions of several federal programs expired or tapered off. The full economic effects of the COVID-19 pandemic cannot be quantified in the state personal income estimates because the impacts are generally embedded in source data and cannot be separately identified. For more information, see [“Federal Recovery Programs and BEA Statistics.”](#)

State Personal Income, Fourth Quarter 2021

State personal income increased 2.4 percent at an annual rate in the fourth quarter of 2021 after increasing 3.0 percent in the third quarter (table 5). Increases in earnings and property income were partially offset by decreases in transfer receipts. The decrease in transfer receipts reflected lower state unemployment insurance compensation payments. The percent change in personal income across all states ranged from 9.2 percent in Texas to -8.7 percent in North Dakota (table 6).

Increases in earnings in mining were the leading contributor to increases in personal income in Texas and Oklahoma, the states with the largest and third largest increase in personal income (table 8).

Farm earnings was the leading contributor to decreases in personal income in North Dakota and four other states including South Dakota, Iowa, Nebraska, and Kansas. The decrease in farm earnings followed decreases in payments to farmers from the Coronavirus Food Assistance Program and the Paycheck Protection Program.

Updates to State Personal Income

Today, BEA also released revised quarterly estimates of personal income for the first quarter of 2021 through the third quarter of 2021. Updates were made to incorporate source data that are more complete and more detailed than previously available and to align the states with revised national estimates that were released on February 25, 2022.

BEA also released revised quarterly and annual estimates of population and per capita personal income for the second quarter of 2010 through the third quarter of 2021. BEA used new Census population figures to calculate per capita personal income estimates for the second quarter of 2020 through the fourth quarter of 2021. BEA also used new Census population figures to update annual 2020 per capita personal income statistics and to produce new per capita personal income statistics for 2021. For earlier estimates, BEA used intercensal population statistics that it developed based on Census' methodology. With these data, BEA updated its annual per capita personal income estimates from 2010 through 2019 and quarterly estimates for the second quarter of 2010 through the first quarter of 2020. BEA developed intercensal population statistics because these data were not available when Census released state population data for 2020 and 2021, based on the 2020 decennial counts.

BEA produced intercensal population figures to create consistent time series that are used to prepare per capita personal income statistics. BEA used the Census Bureau's application of the [Das Gupta method](#), modified to account for an extra leap year day, to produce the intercensal population figures that will be used until Census releases its official intercensal population data.

Next release: June 22, 2022, at 8:30 a.m. EDT
Personal Income by State, 1st Quarter 2022

Definitions

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Per capita personal income is calculated as the total personal income of the residents of a state divided by the population of the state. In computing per capita personal income, BEA uses midquarter population estimates based on unpublished Census Bureau data.

Earnings by place of work is the sum of wages and salaries, supplements to wages and salaries, and proprietors' income. BEA's industry estimates are presented on an earnings by place-of-work basis.

Net earnings by place of residence is earnings by place of work less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis. BEA presents net earnings on an all-industry level.

Property income is rental income of persons, personal dividend income, and personal interest income.

Personal current transfer receipts are benefits received by persons from federal, state, and local governments and from businesses for which no current services are performed. They include retirement and disability insurance benefits (mainly social security), medical benefits (mainly Medicare and Medicaid), income maintenance benefits, unemployment insurance compensation, veterans' benefits, and federal education and training assistance.

Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

The estimate of personal income for the United States is the sum of the state estimates and the estimate for the District of Columbia; it differs slightly from the estimate of personal income in the National Income and Product Accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Statistical conventions

Quarter-to-quarter percent changes are calculated from unrounded data and are annualized. Annualized growth rates show the rate of change that would have occurred had the pattern been repeated over four quarters (1 year). Annualized rates of change can be calculated as follows: $((\text{level of later quarter} / \text{level of earlier quarter})^4 - 1) * 100$. Quarterly estimates are expressed at seasonally adjusted annual rates unless otherwise specified. Quarter-to-quarter dollar changes are differences between published estimates.

BEA regions

BEA groups all 50 states and the District of Columbia into 8 distinct regions for purposes of presentation and analysis as follows:

New England (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont)

Mideast (Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania)

Great Lakes (Illinois, Indiana, Michigan, Ohio, and Wisconsin)

Plains (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota)

Southeast (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia)

Southwest (Arizona, New Mexico, Oklahoma, and Texas)

Rocky Mountain (Colorado, Idaho, Montana, Utah, and Wyoming)

Far West (Alaska, California, Hawaii, Nevada, Oregon, and Washington)

Uses of state personal income statistics

State personal income statistics provide a framework for analyzing current economic conditions in each state and can serve as a basis for decisionmaking. For example:

- Federal government agencies use the statistics as a basis for allocating funds and determining matching grants to states. The statistics are also used in forecasting models to project energy and water use.
- State governments use the statistics to project tax revenues and the need for public services.
- Academic regional economists use the statistics for applied research.
- Businesses, trade associations, and labor organizations use the statistics for market research.

1. Net earnings is earnings by place of work—the sum of wages and salaries, supplements to wages and salaries, and proprietors' income—less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

Note. Estimates may not add to totals because of rounding.

Source. U.S. Bureau of Economic Analysis

1. Percent changes are expressed at annual rates.

2. Net earnings is earnings by place of work—the sum of wages and salaries, supplements to wages and salaries, and proprietors' income—less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

Note. Estimates may not add to totals because of rounding.
