

Coordinating Committee: Report to ACDEB on NSDS Vision

Anna Hui and Nick Hart, ACDEB Members

July 23, 2021

Overview of Kickoff Discussion

Coordinating Committee's Positions

- **NSDS as envisioned by the Evidence Commission is a basic framework to support**
- **Additional design principles and concepts are needed for integrating with state and local government support**
- **A data service should be a principle, place (or places), and service. It should supplement rather than displace the existing ecosystem.**
- **No single service will likely meet all needs, and may suggest a federated or coordinated model for the NSDS to involve multiple linkage hubs and capabilities**
- **Activities the NSDS should support include:**
 - **Leadership – Support for articulating the value proposition and benefits**
 - **Transparency – Model for demonstrating how transparency and engagement for data use should occur**
 - **Integration – A capability to align and collaborate across data linkage hubs**
 - **Innovative – A place for piloting new approaches (e.g., MPC)**
 - **Technical Support – Expertise to provide technical assistance, advice, and support for linkage, sharing (standard MOU templates), quality, access**
 - **Intergovernmental Cooperation – provide technical and analytical capabilities to support needs of federal, state, and local entities**

Full Committee Discussion

Discussion Questions

- What are committee members reactions to initial positions offered by Coordinating Committee discussions?
- Are we missing any position and why is missing item significant to the overarching NSDS framework?
- Should any one aspect of the Coordinating Committee's positions be prioritized over others ?
